# Prefere Resins

## Prefere Resins co-organizes the first online trade fair dedicated to coated abrasive producers together with 4 key market players

This online trade fair will take place from May 17 to May 28. Prefere Resins, your „preferred supplier“ for phenolic, specialty urea and melamine resins for the coated abrasives industry.

Dedicoated 3.0 is the first ever online event organized for coated abrasive producers. Prefere Resins is co-organizing this event with Ahlstrom-Munksjö, Peter Schwabe, Imerys and Shabra.

Over 9 days, customers will be invited to join interactive sessions focusing on three technical challenges: ever finer sandpapers, production efficiency and raw material & process versatility.

Out of the 14 technical live talks, five lectures will introduce solutions and define key parameters for processes which can support coated abrasive producers on their road to sustainability and offer opportunities to improve the life cycle profiles for coated abrasives:

Resin toolbox - new options to use phenolic resins and features to adapt properties and characteristics coming from preselected additives or modifications. This package and set of service open the door to customize your resin easily.

Towards a more sustainable resin - discover ways of creating a more sustainable and efficient resin. Clemens Gartner from Prefere Resins will explain a holistic view of a European chemical production site resulting in sustainable resin solutions and an improved carbon footprint for coated abrasives.

Prefere Resins offers tailor-made phenolic and amino resins for coated abrasives and also a full set of resins used in the bonded abrasives industry.

“We are glad to be close to our customers in the coated abrasives industry in these challenging times together with our partners Ahlstrom Munksjö, Peter Schwabe, Imerys and Shabra”, commented Elmar Boeke, COO.

Prefere Resins is your „preferred supplier“ for phenolic, specialty urea and melamine resins.

As one of the global market leaders we supply you with a wide range of resins, basic chemical raw materials and additives – quickly and reliably from 14 production sites worldwide.

Especially our tailor-made phenolic and amino resins have found manifold uses in the construction industry, the insulation industry and for various special industrial applications – wherever you need us.

The Prefere Resins Group employs around 600 people and generates sales of around 450 million EUR. Together with our customers and employees, we constantly invest in new products and technologies for further growth.
